

CASE STUDY: LOS ANGELES FOOTBALL CLUB CUSTOM SC PRO RISER

Customer: PCL Construction
Banc of California Stadium - LAFC
Scope: Large Custom Seating Solution
Location: Los Angeles, CA
Principal Products: SC90 Pro Riser
Market: Sports

At the beginning of 2018, we installed a custom SC Pro Riser seating system at the Banc of California Stadium for the Los Angeles Football Club. This demountable seating solution is just part of the newly constructed soccer stadium that will hold 22,000 seats. The installation of our SC Pro Riser provides the ability to easily remove 1,500 seats from the north end zone, making it ideal to transform the stadium to host concerts and other events. This custom seating system is comprised of six rows of towers and riser units that can be removed and then moved by a forklift to storage at the facility.

Staging Concepts is quite proud of this project and all the time and effort put forth by our design and engineering team. Due to the size of the venue and strict California codes we had to adhere to, we had several parameters to

troubleshoot and work around. And in the end, we developed a solution that allows a complex seating structure to easily be broken down and stored onsite to maximize its year-round use.

With the help of PCL Construction, we completed the installation of this custom project in April, just in time for Banc of California Stadium's grand opening scheduled for April 29, 2018.
